## DECEMBER 1958

LIBRARY
FEB 20 1959

## General Summary of Weather Conditions

December was very cold in the eastern half of Canada with some stations reporting the lowest December mean temperature on record. Temperatures were not far from normal in Manitoba and Saskatchewan while Alberta and British Columbia reported excesses ranging to five degrees. The Arctic Archipelago reported the largest temperature excesses - that at Eureka being twelve degrees.

There was very little rain in the eastern half of Canada because of the cold and so total precipitation was generally below normal. The precipitation pattern over British Columbia and the Prairie Provinces was irregular with the average for the area above normal. The Northwest Territories was the only large section with consistently above normal precipitation.

December was very cold on the island of Newfoundland, a number of stations reporting new record mean temperatures for the month, notably Gander and Torbay. All stations on the Island reported below normal temperatures for the month, deficiencies ranging from four to nine degrees throughout the Island.

Because of the intense cold, rainfall was generally much below normal but heavy snowfalls occurred throughout the island of Newfoundland, particularly on the Avalon Peninsula. On the evening of December 31st, a very heavy storm brought a quarter inch of freezing rain and fourteen inches of snow to St. John's and similar amounts to the rest of the Avalon Peninsula. The storm halted air and surface transportation as the year ended. St. John's reported sixty inches of snow for the month - a new record, the previous high being fifty inches in 1951. Despite the heavy snowfall, precipitation was not far from normal with excesses ranging to thirty per cent on the Avalon Peninsula, and deficiencies to twenty per cent throughout the remainder of the Island.

December was also cold along the coast of Labrador, mean temperatures ranging from two to five degrees below normal along the coast, and six degrees below normal at Goose Bay. Precipitation for the month averaged about thirty per cent below normal in the southern half of the coast of Labrador but stations on the northern half of the Coast reported excesses ranging to fifty per cent.

In the Maritime Provinces December weather was characterized by the presence of arctic air during most of the month. As a result temperatures were generally cold, the coldest days coming on the 21st, 22nd and 25th. On the 22nd Riley Brook reported -40°F. which was the coldest of the month in the Maritime Provinces. For the month as a whole average temperatures were five to nine degrees below normal in Nova Scotia, and eight to eleven degrees below normal in Prince Edward Island and New Brunswick. It was the coldest December since 1933 for many Maritime stations.

It was a stormy month in the Maritime Provinces. There were numerous travelling low pressures in the first twenty days of December and the bulk of the month's precipitation fell during this time. An intense storm on the 4th gave winds gusting to 75 miles per hour in places. Other intense storms affected the area on the 12th and 16th, while on the 31st an Atlantic storm was too far at sea to give precipitation over the region but caused winds gusting to over 70 miles an hour. Average wind speeds were high for the month, Halifax reporting the highest December average on record. Because of the cold rainfall was light, but snowfall was generally well above normal. Precipitation ranged from fifty per cent below normal to twenty per cent above normal in Nova Scotia, and was within twenty per cent of normal on Prince Edward Island, while New Brunswick experienced deficiencies ranging to seventy per cent, averaging about forty per cent.

The weather was intensely cold in December in the Province of Quebec. There were a number of severe cold spells, but the most noteworthy occurred on the 20th, 21st and 22nd, when temperatures of -14°F. were reported at Montreal and -19°F. at Quebec City, while in the central and northern interior of the Province temperatures were below -40°F. Mean temperatures for the month were ten to fifteen degrees below normal in the St. Lawrence River Valley above Quebec, generally about ten degrees below normal on the Gaspe Peninsula and in the remaining south and central parts of the province with anomalies decreased northward to two below normal at Chimo and one below normal at Hopes Advance. Berthierville experienced the greatest negative anomaly in the country for the month - sixteen degrees below normal, while at Montreal the mean December temperature was the lowest since 1933.

Throughout the Province of Quebec deficiencies ranged to thirty per cent in the Eastern Townships, to forty per cent on the Gaspe Peninsula, and from forty to sixty per cent in the central interior of the province. The far northern section of the province was exceptional, Cape Hopes Advance reporting three times the normal fall, while Fort Chimo had a thirty per cent excess.

All parts of Ontario were cold throughout December. The coldest spells were on the 8th, 9th and 10th, when many southern Ontario stations reported below zero temperatures, and the 19th, 20th, 21st and 22nd, when London, Ontario reported -11°F. The coldest place in Ontario during December was Central Patricia which reported -54 on the 19th, and -50 on the 9th. For the month as a whole, mean temperatures were seven to ten degrees below normal in southern Ontario and most of northern Ontario, with a slight amelioration in the extreme northern section where Moosonee reported only six degrees below normal and Trout Lake the same. In central-southern Ontario it was the coldest December since 1917.

Rainfall was deficient due to the cold in all parts of Ontario. The regions bordering on Lake Huron and Georgian Bay received an excess of snow - Lucknow reporting 74 inches to quote one noteworthy example. Elsewhere in Ontario snowfall was normal or below. December precipitation totals were ten to forty per cent above normal along Lake Huron and Georgian Bay and on Manitoulin Island. There were also small excesses in the districts of Kenora and Rainy River. Throughout the remainder of Ontario there were deficiencies ranging generally to forty per cent but reaching eighty per cent in southwestern Ontario.

Manitoba was also cold throughout the month of December with the coldest spells occurring on the 7th to 14th and 19th to 22nd. Many stations reported their coldest temperature of the month on either the 9th or the 19th. The last week of the month was somewhat warmer and most stations in the southwestern corner of the Province experienced temperatures slightly above normal. For the month as a whole there were deficiencies of mean temperature ranging to some four degrees in the southwest corner and to ten degrees along the eastern edge of the Province.

A storm on the 31st brought a southerly flow of mild Pacific air over the Province resulting in record daily maximum temperatures at Dauphin, The Pas, Brochet and Gillam.

Precipitation was generally above normal in the Province of Manitoba with stations in the vicinity of the Manitoba Lakes experiencing about twice the normal fall. In the valleys of the Assiniboine and Souris Rivers there were deficiencies ranging to fifty per cent. There was also a deficiency of fifty per cent at Churchill, but elsewhere in the Province of Manitoba there were small excesses.

In the Province of Saskatchewan the first few days and the last ten days of December were mild, while temperatures were below normal on the intervening days. For the month as a whole, the cold and warm spells nearly balanced and as a result there were deficiencies of only one or two degrees in eastern Saskatchewan and excesses of one or two degrees in western Saskatchewan.

The distribution of precipitation in Saskatchewan was quite irregular, but in general stations in the eastern half of the province experienced excesses, ranging to over one hundred per cent at a number of stations. Most stations in the western half of Saskatchewan had deficiencies ranging to about fifty per cent.

The first three or four days of December were mild in the province of Alberta. This was followed by below normal temperatures until the 14th with the coldest days coming on the 6th, 7th and 8th. From the 14th to the end of the month temperatures remained above normal. For the month as a whole, temperatures averaged two to five degrees above normal in the southern half of Alberta and within one or two degrees of normal in the northern half.

In the section of Alberta from Edmonton south to the International Boundary, precipitation was spotty. Two stations reported twice the normal amounts, and from there the range was down to deficiencies of fifty per cent. In the southern half of Alberta the pattern was more consistent, excesses ranging from sixty to ninety per cent.

Mild Pacific air was the dominant air mass over British Columbia during December although there was one outbreak of Arctic air on about the 7th. As a result temperatures were slightly above normal throughout the Province, excesses ranging to five degrees in the southern half of the Province and three degrees in the northern half. December precipitation was rather irregular but generally above normal throughout the Province. Excesses ranged to sixty per cent on Vancouver Island and to fifty per cent in the Okanagan Valley. Stations in the Peace River Valley reported about twice the normal amount and Vanderhoof, near Prince George, reported two and a half times the normal fall. Elsewhere in the Province there were both excesses and deficiencies ranging to fifty per cent.

In the southern half of the Yukon Territories December mean temperatures were normal to five degrees below normal, while Dawson and Mayo Landing in the northern section each reported excesses of about three degrees. There were precipitation deficiencies of fifty per cent at Snag and Aishihik, and fifteen per cent at Dawson. All the remaining stations in the Yukon had excesses averaging fifty per cent.

December mean temperatures were normal to two degrees below normal in the district of Mackenzie, except at Fort Reliance and eastward where deficiencies ranged to six degrees. In Keewatin district there was a seven-degree deficiency at Ennadai Lake but Baker Lake reported only two degrees below normal. All stations on the Arctic Archipelago experienced above normal temperatures with the greatest excess - twelve degrees - at Eureka.

The Northwest Territories experienced above normal precipitation in December especially in Mackenzie District where amounts ranged to over twice normal. On the Arctic Archipelago excesses ranged to ninety per cent. Keewatin was exceptional with all stations reporting deficiencies averaging seventy per cent.

# DECEMBER 1958
# TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

## *British Columbia*
